# ZUKUNFTS- KONFERENZ LICHT 2019

der Deutschen Lichttechnischen  
Gesellschaft

15. / 16. May 2019  
in Hamburg

## “CALL 4 FUTURE”

Ideas – Future Concepts –  
Innovations – Rethinking Light

The discussions about the future of light and lighting have to encompass a **holistic and comprehensive approach involving unique thinking** and design and a creation of an “innovative toolbox”.

The “Zukunftskonferenz LICHT” (ZK19) being organized by LiTG – focusses on offering an holistic approach and hence is **free of any kind of manufacturers, suppliers, lobby interests** etc. This conference serves as an independent expert conference, encouraging people to think outside the box and finding new and innovative approaches. The ZK 19 does not limit itself to specific topics but instead allows for a new type of **interdisciplinary, cross-cutting themes and open-ended exchanges** on the future of light and lighting.

**Future is always associated with people** – with their needs, requirements and also with the social developments. Some of the open questions include, for example, whether and to what extent trends and developments in light can be monitored and therefore can be focused upon. What in the future, can be outlined in terms of lighting technology, design, medicinal, and other aspects? The effects of light and its significance goes far beyond the immediate and direct biological effects and are **more than just visual and non-visual** in nature. Light thus, affects social and evolutionary state and influences life on the planet as a whole, including flora and fauna.

The ZK19 wants to rethink light and show opportunities for the **light of tomorrow** and the day after tomorrow.
